POP, IMAP, SMTP, HTTP, SSL, LDAP, MIME, iCal, vCard

DIRECTORY

Any LDAP-based directory
Active Directory Integration

STORAGE ARCHITECTURE

Any SAN, and DAS, and any Fibre Channel or iSCSI NAS

Robust Linux messaging that meets the demanding needs of enterprise.

Scalix Enterprise Edition is a robust messaging solution that scales for even the largest organizations. It is built on the open source Scalix Collaboration Platform with its robust Mail Server, comprehensive administrative environment, powerful Web services platform, and localization kit. In addition to the Scalix Collaboration Platform components and features, Enterprise Edition provides the following enterprise-critical capabilities.

FULL SUITE OF TRUE ENTERPRISE CLIENTS

Scalix Enterprise Edition provides full feature, native support of both Outlook and Evolution, delivering two powerful desktop client options, so users of both Windows and Linux desktops can be highly productive. Enterprise Edition also supports Scalix Web Access, an AJAX-based Web client that gives users the same full function experience and fast performance they get with a desktop client. It supports the innovative Scalix Mobile Web Client which gives organizations a simple way to keep all users connected while mobile, without having to install anything on the device or pay any license fees. And of course, Enterprise Edition provides free access for an unlimited number of IMAP or POP clients.

SUPPORT FOR ALL LEADING WIRELESS DEVICES

Scalix Enterprise Edition supports all leading wireless devices via an optional 3rd party wireless solution. The solution, NotifyLink Enterprise Mobility Solution for Scalix, is offered by Notify Technology Corporation. NotifyLink allows Premium Users to access all Scalix mailbox email and PIM (calendar, contacts, tasks, and notes) across a broad choice of wireless network technologies and wireless devices including Palm OS, Windows Mobile devices and Blackberries.

TRANSPARENT MULTI-SERVER SUPPORT

Enterprise Edition gives you the ability to span one or more domains across multiple servers. With multi-server support, delegate access and folder sharing work transparently across servers, as if users were on the same server. The global address book is fully synchronized across the organization. All Scalix Mail Servers can be centrally administered from a single Management Console. Public folder data is replicated across servers, thus each server maintains its own copy of the data for fast access by local users.

HIGH AVAILABILITY

Scalix Enterprise Edition supports high availability so your operations continue to run smoothly even if a server fails. It supports various high availability topologies including active-passive and active-active configurations.

PRODUCT DATASHEET: SCALIX ENTERPRISE EDITION

SYSTEM REQUIREMENTS

Operating system

One of the following versions of Linux:

- Red Hat Enterprise Linux ES 5.0, 6.0
- SUSE Enterprise Server 10.0 or 11.0
- Fedora 9*
- SUSE Open Source Software (OSS) 11*

RAM

2GB

Disk

200 MB for base installation

- + Space for user mailboxes
- + Space for client caches equivalent to 15% of data being indexed
- + 30% additional for LVM snapshot

*These distributions are not recommended for production because of the frequency of upgrades.

ABOUT SCALIX

Scalix is owned by Scalix, Inc., a leading provider of Linux-based email solution. We address the needs of enterprises for a robust, feature-rich messaging solution that offers freedom and choice. Our product architecture is open, and our product integrates with existing messaging clients, infrastructure, and applications. Scalix enables profitable email and calendaring services for a complete range of clients, including Outlook, in an easy to manage, highly reliable, and feature-rich messaging platform.

MULTI-INSTANCE SUPPORT

Enterprise Edition allows multiple instances of the Scalix product to co-exist on a single server, each with its own user set, domain name, and message store.

INSTANT, USER-SPECIFIC RECOVERY OF DELETED ITEMS

Scalix Enterprise Edition provides a means for Premium Users to rapidly recover deleted items on a user-specific basis. The Recovery Folder retains emails removed from the user's Deleted Items folder. Recovery Folder itself is hidden from the user's view, but when needed can be made visible to the user with a click. The user then sees their Recovery Folder and can retrieve their lost item.

ACTIVE DIRECTORY EXTENSIONS

Scalix Mail Server integrates with any LDAP-based directory. In addition, Enterprise Edition provides Active Directory extensions so Scalix-specific object classes and attributes can be created within Active Directory. With Active Directory extensions, two new Scalix-specific tabs appear in the Active Directory Users and Computers interface (ADUC), and all Scalix users and groups can be managed using the easy and familiar ADUC interface and wizards.

TNEF FOR TRANSPARENT EXCHANGE CO-EXISTENCE

Enterprise Edition offers full interoperability with proprietary Microsoft Exchange environments, using TNEF for server-to-server transparency. This provides the freedom to migrate mail servers over any time period. Full fidelity is maintained for all messages and calendar items including fonts, tables, word wrapping, line breaks, and reply-ability.

MIGRATIONS FROM EXCHANGE TO SCALIX

The optional Scalix Migration Tool allows user data to be easily migrated from Exchange to Enterprise Edition Premium User mailboxes. No changes to the corporate directory or network topology are required. The tool reliably migrates all mailboxes, messages, public folders, calendars, and directory data from Exchange. The migration process ensures full message fidelity and message reply-ability.

COST-SAVING LICENSING MODEL

On all Scalix product editions, Standard Users are free and any number can be provisioned. Many organizations have a segment of users who are fully productive as free Standard Users. Manufacturers, for example, often provision plant personnel as Standard Users, giving them email and individual calendaring, while provisioning headquarters staff as Premium Users with rich groupware capabilities.
